

Check-Up Diagnostics:

The modern way of life requires us to cope with the stress on a daily basis.

Researches show that early detection of risk factors can prevent the development of various diseases and often save lives. Treatment at the early stages increases the chances for the full recovery.

We offer a special Check up program in one of the leading Israeli medical centers, which is equipped with the latest technologies. Check up is conducted under the guidance of the best specialists. The complex character of diagnosis allows detecting asymptomatic illnesses. After the completion of the examinations and consultations you can relax in the VIP- room and enjoy breakfast.

In emergency cases call: +972 54 8114198
(twenty-four-hour)

Check-Up Diagnostics Includes:

1. **Therapist's full medical examination**
2. **In-depth laboratory tests**, such as urinalysis, complete blood test including **HS-CRP** test, exclusive for the Tel-Aviv Medical Center (blank filling is needed), which is considered to be the best predicting test regarding the presence of the high-risk heart and blood vessels diseases. The results of this unique test will be accompanied with recommendations regarding the way of life the patient should follow in order to significantly improve health conditions.

PCD - the early prostate cancer detection (for men after the age of 40)

Occult blood **feces analysis** for early detection of colon cancer.

Total comprehensive blood analysis, biochemical blood indicators - 21 tests.

HBA1C test for the latent diabetes mellitus diagnosis which dimensions are growing in the recent years, even among relatively young patients. This unique test reflects the level of sugar in the blood during the previous two weeks as well as at the time of the analysis. This information ensures a high reliability of the results. It provides a complete presentation of the balance values of sugar in the blood, which enables the medical staff to pick up a more precise treatment.

HIV testing (AIDS) – optional.

Functional examination of the cardiovascular system: ECG at rest and during physical exercise (ergometry) - is carried out by a cardiologist.

Consultation with an ophthalmologist – examination of eye grounds, visual acuity, intraocular pressure (for early diagnostics of a glaucoma).

Functional examination of the respiratory system - spirometry.

Functional examination of the hearing.

Chest X-ray.

3. **Tests for women**

Gynecological examinations, including PAP SMEAR of the cervix for the early diagnostics of cervical cancer.

Breast examination - is conducted by a surgeon
